## WATERPROOF DATA PROTECTION

> The newest additions to Kingston Technology Company's line of ultra-secure USB drives are the DataTraveler Vault (DTV) and DataTraveler Vault – Privacy Edition (DTVP) drives. These drives come equipped with 256-bit AES hardware-based encryption, which enables information to be encrypted and decrypted by authorised users via a dedicated co-processor on the drive.

Both drives are waterproof and have aluminum casings. These secure USB drives perform at the top of their class with 24MB/sec read and 10MB/sec write speeds, and up to 15MB/sec read and 10MB/sec write for 1GB capacities. Additionally, the DTV and DTVP drives are available in capacities up to 16GB.

Designed to protect sensitive data on Windows-based systems, the Kingston DataTraveler Vault comes with DTVaultLock security software that lets users apply password access control to a designated private data storage area on the drive. If it's ever lost or stolen, this advanced encryption continues to protect data in the drive's privacy zone.

To meet specific enterprise-level security and compliance requirements, Kingston's DataTraveler – Vault Privacy Edition drive is 100 per cent secure requiring a complex password protocol which locks out potential attacks after 10 consecutive failed password attempts.

The drives are easy to use and have no admin rights or application installation requirements.

## AUSSIE SECURITY INNOVATION

> The CA Security Compliance Manager, a new, Australian-developed security product, helps CA customers address IT security and compliance with legal, corporate and government regulations.

CA Security Compliance Manager will help organisations automate processes for answering security questions like "Who has access to what?" "Who can do what?" and "Who approved what?"

This helps detect security policy or compliance violations and then the product initiates any necessary remediation.

CA Security Compliance Manager is one of three new CA identity and access management (IAM) products announced

recently and include CA Identity Manager, CA Access Control Premium Edition and CA Security Compliance Manager. These products are designed to help manage the identity lifecycle, and provide robust IT security controls, analysis and proof of compliance, as well as automating compliance processes.

"We are delivering products, such as CA Security Compliance Manager, that help businesses achieve what we call security compliance," said Andrew Kelly, director of CA's security business unit in the Pacific region.

"Security compliance means a company can provide IT security controls and show proof of compliance while automating processes. This ensures streamlined, consistent compliance procedures."

## RUGGED NOTEBOOKS

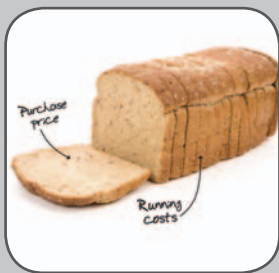

> Twinhead Corporation has added two new Durabook rugged notebook computers to its product line. The Durabook S13Y has a 13.3" wide-screen display which gives users a choice of the popular wide-screen format; the S14Y offers a new enhanced rugged design in the popular Durabook 14" format. The new S14Y has a sleek silver casing with four black bumpers surrounding the edges, providing greater protection for the notebook and increased drop-resistance. Both models come with the latest Microsoft VISTA Premium version operating system running on a 64bit computing Intel Core2 Duo processor carrying a three-year limited warranty.

Twinhead Durabook notebook computers combine elegant

style with lightweight portability and a rugged quality not typically found in notebooks. Both new Durabook models are protected by a lightweight magnesium alloy case that is 20 times stronger than traditional plastic cases, yet the Durabook notebook still weighs less than 2.7kg.

Each Durabook notebook meets the military 810F specification for drop resistance, and passes U.S. military standards for shock and spill resistance as well. With Twinhead's anti-shock mounting design, all Durabooks provide additional protection for critical components, such as the LCD, RAM, Intel-powered CPU and HDD.

Twinhead's Durabook S13Y is priced starting at \$2,299 RRP and the S14Y starts at \$1,999 RRP.

## SAVE RUNNING COSTS

> Did you realise that the cost of running your laser printer over its lifetime is likely to exceed the original purchase price by several times?

Kyocera can help departments, both large and small, make significant savings.

To help you understand exactly how much your company is spending on document production and where the inefficiencies might be, Kyocera can offer your organisation an obligation free audit.

Dennis O'Malley, contract manager of SWARH (South West Alliance of Rural Health, Victoria) took advantage of this and

noted that, "Kyocera audits are done professionally with a great deal of detail. Even if you are just looking at 10 to 20 machines, over four years, this can really add up to large cost savings. A big advantage of the Kyocera machines is the drums, which have a greater life span than other vendors and that's what leads to the cost savings. All your costs and potential savings are in the consumables. There's not much difference between the machine costs."

Kyocera not only has the lowest running costs of any printer and copier brand in Australia, but a long-standing commitment to reducing environmental impact through product design and business practices.

## SECURITY SMARTS

> NEC is one of the world's leading biometric and security solutions providers delivering a comprehensive set of integrated identification systems that are tailor-made for business and governments.

SmartCatch automatically analyses video input streams looking for pre-programmed behaviours that constitute a security breach. It provides 10 behaviour modules that detect suspicious activities indoors and out including crowd detection, loitering and perimeter intrusion.

SmartCatch provides a quantifiable increase in security and public and employee confidence by providing a blanket of

protection without inconvenience to passengers or employees.

NEC's Biometric Solutions are scalable, user-friendly, turnkey solutions that have a proven global track record. NEC has provided some of the world's largest-scale AFIS implementations and has the most advanced and accurate AFIS system available.

NEC NeoFace technology is being used around the world for passport verification, mugshot searching, annual pass verification, door access control and general identification applications. NeoFace face recognition provides a convenient non-contact form of authentication or identification using 'Adaptive Region Mixed Matching', which focuses on segment regions with a high degree of similarity for matching.
