

Kyocera Mita Launches Document Management Solutions that Save Time and Cut Costs

Sydney, Australia – Tuesday 16 March, 2010 –Kyocera Mita, one of the world's leading document imaging companies, today launched a range of new document management solution systems that will provide businesses, government departments and educational institutions with the capability to streamline document management processes, allocate and cut costs and save time, energy and waste.

The new KYOcapture solution from Kyocera enables businesses to recognise, capture and route all types of business documents, whether in hard copy or electronic format, to the desired document or content management system with ease, thereby streamlining the efficiency of internal workflow systems.

The specification of which workflows should be automated or which document types are received from particular sources are recorded only once, enabling improved efficiency and cost savings across any department or organisation that systematically manages business documentation.

KYOcapture software uses Optical Character Recognition (OCR) to automatically recognise the contents of a document and then converts it into the desired format for processing. The software simplifies the organisations tracking and management requirements whilst promoting end-user flexibility within the office environment.

Kyocera Mita also offers two new optional print management software solutions, provided by Equitrac Corporation – the worldwide leader in intelligent cost recovery and print management solutions. The software solutions simplify print-copy tracking, enabling businesses greater management insight into document output volumes and helping to reduce print waste.

"In today's fast paced society, end users are becoming more focused on finding ways to reduce and control print costs, without sacrificing workplace performance, productivity or security," said David Finn, Managing Director, Kyocera Mita Australia and New Zealand.

"We're pleased to offer a range of new solutions to the market which will help businesses and organisations realise such goals," he added.

Equitrac Office ®, which has been designed for enterprise, government and small-to-medium businesses, allows employees to print documents in a secure manner to devices within the organisation - across servers, departments and different locations. Offered as a device embedded or terminal based software solution, Equitrac Office enables administrators to track all print activity and contain costs, regardless of the organisation's size and output.

Equitrac Express ® has been designed to manage the document output requirements of educational institutions and organisations that need to charge users for using print and document management devices. The system enables institutions to allocate costs through a centrally managed print application to provide reliable and secure print tracking for printers and MFDs.

Equitrac Express software can be integrated with the card systems used by university and educational institutions, so less time and money is needed on the administration and

management of printing devices as every student, teacher and staff member is accountable for each page they print.

-more-

“Our new range of document management solutions enable organisations to maximise their document output control workflows, allocate expenditure, cut costs and minimise print waste – all through simplified tracking, analysing and outputting of documents across their organisation,” Mr Finn concluded.

About Kyocera Mita

Kyocera Mita is one of the world's leading document solutions companies and has been dedicated to helping organisations minimise financial and ecological waste for more than 50 years. Delivering a complete range of printers, copiers and other document management solutions, Kyocera is renowned for its unique ECOSYS® durable imaging system. This enables Kyocera to offer cost-saving printer technology with long-life imaging components that provide greater reliability, are friendlier to the environment and present a significantly lower cost per printed page - resulting in a lower Total Cost of Ownership (TCO) over the life of the product.
